ABSTRACT:
Life comprises of states of health and disease. Ayurveda, the unbeaten science deals with these states of life. Ayurveda incorporates both the preventive and curative aspects of human aliments, promising it to be holistic science. The science of Ayurveda is renowned for healing of Musculoskeletal and Neurological complaints. The following topic “Rheumatoid Arthritis: A literary review based on ayurvedic classics” is reviewed through Ayurvedic classics in integration to modern medical facts in the causation and the course of the disease Amavata with reference to Rheumatoid Arthritis. Amavata is the most prevailing disease of current era, which is resulted due to the impaired functioning of kayagni. The disease is characteristically identified by the presence of its systemic and more so over the generalized symptoms like – Angmarda, Aruchi, Trusana, Alasaya, Gourava, Jwara, and Apaka. Later in the content of some specific more so over localized complaints like Sandhishotha, Sandhishool and Sandhistabhata. The disease is said to obtain a critical picture with many dreadful complications in due course of its progression. It is the disease of Madhaya roga marga, so the treatment of Amavata is said to be Krichrasadhya.

Key words: Amawata, R.A., Arthritis, Ama.

INTRODUCTION
Amavata is a disease in which in which vitiation of Vata dosha and accumulation of Ama taken place in joints. Ama is a undigested product, which is not homogenous for the body, whenever that Ama gets localized in the body tissue or joints, it can lead to production of pain, stiffness, swelling, tenderness etc in the related joints.

The features of Amavata are much identical to Rheumatoid Arthritis. This is an autoimmune disease that causes chronic inflammation of the joints. The disease usually being gradually with fatigue, morning stiffness, and widespread muscle aches, loss of appetite & weakness.
About 2% of the world population is affected by R.A., women three times more often than men. It is most likely to strike people 30-40 yr of age, but it can occur in children, teenagers and elderly people.

**LITERARY REVIEW:**

*Hetu / Etiology*

1. **Viruddha Ahara** (Incompatible food)
2. **Viruddha Cheshta** (Improper physical activity)
3. **Mandagni** (Decreased digestive power)
4. **Nischalata** (Lack of physical activity)
5. **Snignham bhuktavato vyayaamam** (Performing physical exercise soon after intake of heavy food causes Ama in the body.)

**Samprapti of Amavata**

As discussed earlier whenever the function of Agni is disturbed in the body Ama is produced. This produced Ama is slimy in nature, such Ama get together with Dushit Vata / Prakopit Vata and circulates all over the body through Shira and Dhamani and gets lodged in Kaphasthana i.e. Sandhi because Shleshak Kapha is located in Sandhi and Amvata is developed.

**Samprati cycle**

Doing Vyayam after intake of guru snigdha sevana + Vata prakopaka hetu sevan

- Ama dosh formation + vata prakopa
- Circulation of ama through vitiated vata

**Pathogenesis**

1. Synovitis
2. Pannus formation
3. Cartilage loss
4. Fibrosis
5. Bony erosion, deformity, fibrous and bony ankylosis
6. Muscle wasting
7. Periarticular osteoporosis

**Purvarupa**

Amavata is not distinctly mentioned in Brihattayi. Only Vangasena has given Shiroruja and Gatruja as Purvarupa of of Amavata. Early clinical manifestation of the signs/symptoms may be consider as Purvarupa of the disease.

**Lakshana of Amavata** (Signs and symptoms)

Madhavakara, Bhavamishra and other have described the lakshana of Amavata. These can be categorized as follows –

- Pratyatma lakshana
- Samanya lakshana
- Doshanubandha lakshana
- Pravriddha lakshana

Clinical features of Amavata in Comparison with R.A.

- **Hasta sandhi shotha & shoola** – Inflammation & severe pain in metacarlo-phalangeal joints & proximal inter phalangeal joints are affected most severely in Rheumatoid Arthritis.
- **Paad sandhi shotha & shoola** – The feet are often involved especially the metatarso phalangeal joints & subtalar joints are affected.
- **Jaanu gulfa sandhi shotha** – R.A. involves first smaller joints of hands & feet and then symmetrically affects the joints of wrist, elbow, ankle & knee.
- **Angagourav** – Feeling of heaviness in the body.
- **Angamarda** – Body ache, myalgia occurs in R.A

Upadrava/Complication

- Anorexia and feeling of heaviness over the body.
- Loss of interest/drive.
- Bad taste in mouth.
- Polyurea and burning micturition.

- Hardness in the abdomen
- Colicky pain.
- Reversal of normal sleeping habit.
- Thirst etc.

Other joints are involved in Chronic R.A.

**Joint Deformity in R.A.**

1) Swan neck deformity in interphalangeal joint.
2) Boutonniere (Deformity in R.A. with flexion at proximal interphalangeal joint & hyperextension at distal interphalangeal joint).
3) Z deformity in the thumb.
4) Volar subluxation and ulnar deviation occurs at metacarpophalangeal joint.
5) Bilateral flexion contractures of the elbow.
6) Synovitis at the wrist may cause carpal tunnel syndrome.

**American Rheumatism Association (A.R.A.) Criteria for diagnosis**

- A score of ≥6 fulfills requirements for definite RA.

Chikitsa of Amavata\(^{12,13}\):

- **Langhana:** - Langhana is the 1st line of treatment to digest Ama. Here langhana means not complete fasting but, intake of light food. The duration of langhana varies from person to person depending upon individual capacity.

- **Swedana:** - Swedana is sudation therapy; in this disease swedana is done locally on affected joints. In amavata rooksha sweda is recommended (Sudation without oil/fat). For the procedure of rooksha sweda valuka (sand) is recommended. Snehana is contraindicated in amavata.

- **Katu, Tikta & Pachak aahar & aushadhi:** - The drug which possess Katu (pungent), Tikta (bitter) and which act as deepana, pachana (appetizer) are recommended in amavata. These drugs, by virtue of their qualities does amapachana, hence may help in relieving shotha & shoola.

- **Virechana:** - For virechana, erendataila and hareetaki are used. In amavata without any preoperative procedure virechana is recommended directly. Eranda acts as srotoshodhaka, shothahara, shoolahara and amavatahara.

- **Snehapana:** - Snehapana should be given in nirama awastha and is of sham an type indicated in chronic condition of Amavata. Tikta, katu and deepana drugs siddha sneha is quite effective in this condition

- **Basti chikitsa:** - Chakradatta recommends ksharabasti and anuvasanabasti in amavata. Following tailas are used in anuvasana and nirooha basti –
  - Prasarani taila
  - Bruhat saindhavadi taila
  - Dashmooladi taila
Eranda taila is used as base in preparation of these tailas

- Sneha rahit upnaha

As local application upnaha subside inflammation and pain, major symptoms of Amavata.

**Discussion**

Amavata is a disease in which improperly metabolized byproduct known as Ama, produce due to hypo-function of Agni or mandagni, become core cause of disease which is transverse and get deposited in different part of the body mainly sandhi by vitiated vata. Ama may be nutritionally unimportant, but immunologically powerful in evoking strong immune response, as it is vijatiya or foreign substance to the body, this results in formation of antibodies by the defense cells of body. The Ama and antibody then interacts each other to form an immune complex, which is deadly combination. It gets deposited in tissue and produce symptoms of Amavata. Madhavakara was pioneer to describe Amavata as a disease entity in medieval period text Madhav Nidana, Its clear cut description is not found in Brihattrayi through references regarding Amavata was found in hidden form. But concept of Ama is prevailing since Vedic period.

**CONCLUSION**

Amavata is a condition where stiffness of the body occurs due to lodging of vitiated Ama & Vata in Trika Sandhi, potent cause is diminished function of Agni at Jatharagni, Bhutagni and Dhatwagni level. Amavata is Amashayothha Vyadhi, it is produces due to improper functioning of digestive system i.e. Incomplete/improper formation of Annarasa so treatment given in Amavata is 1st Langhana in terms of Ahar and Vihara then Swedana, Tikta Katu Deepana dravyas, Virechana, Snehapana & Basti, Which ultimate leads to Amapachana, Vatashamana & Strotoshodhana
