#### **Abstract:**

**Background:** Vicharchika can he compared Eczema with the of contemporary science. The term Eczema (Dermatitis) refers to inflammation of the skin. Eczema manifests as erythema, vesiculation & oozing in the acute stage, scaling and crusting in the subacute and lichenification stage (hyperpigmentation, accentuation of skin marking &thickening of skin ) in the chronic stage. The exact cause of eczema is unknown. According to Ayurveda the signs and symptoms of eczema can be correlated with Vicharchika which is one type of Kshudra kushta. The symptoms of Vicharchika are kandu (itching), pidaka (eruptions), shyavata (blackish discolouration), bahu srava (discharge), raji (lines) . AIM: To study the effect of Sindhuradya taila in the management of Vicharchika.

**METHODOLOGY:** The present study deals with a 33 years old male patient having complaints of blackish discolouration, and itching over bilateral upper and lower limbs and thorax for 8

years. There was lichenification on bilateral lower limbs, it was in a chronic stage of eczema. **RESULT:** At the end of treatment significant improvement was seen in signs & symptoms. Criteria were assessed before and after the treatment which showed significant improvement. **CONCLUSION:** Sindhuradya taila was found to be effective in the management of eczema.

**KEYWORDS:** *Vicharchika*, *kshudra kushta*, atopic dermatitis, eczema, *Ayurvedic* management.

#### **INTRODUCTION:**

Eczema is a type of dermatitis, commonly called as Atopic dermatitis. Atopic dermatitis is a common, chronic inflammatory skin disease characterized by pruritis and repeated remissions & relapse. It is associated with other symptoms including Asthma and allergic rhinoconjuctivitis The world wide prevalence of eczema ranges from 15%-20%.50% of the cases appear in the first year of life, majority within 5 years and the remaining manifest by 30 years of age. Eczema can be classified in to two broad exogenous groups, and endogenous eczema depending upon whether the causative factors are external or internal. In acute eczema there is erythema, oedema, vesiculation, oozing and crusting whereas in subacute phase there is erythematous hyperpigmentation plaque with scaling and crusting .In chronic phase there is lichenification (a combination of thickening, hyper pigmentation prominent & skin markings) .Most subacute and chronic eczemas are perpetuated by itch-scratch -itch cycle. itching in eczema induce a scratching response which induce more itching.

Vicharchika is a type of kshudra kushta explained in Ayurvedic classics. The main signs and symptoms of Vicharchika described by Acharya Charaka are kandu (itching), pidaka (eruptions), shayavata (blackish discolouration) & bahusrava (oozing) .<sup>1</sup>Raji (linings) and Rukshata are mentioned by Acharaya Susruta<sup>2</sup>. Charaka described Vicharchika as vata kaphaja vyadhi. 3The causative factors of kushta mentioned by Acharya Charaka are the same as raktavaha srotodushti e. viruddha-ahara. vidahi-ahara. g. snigdha-ushna-guru-Drava ahara.<sup>4</sup>

#### **Case-presentation:**

A 33 years old male patient belonging to Tirupati attended P. G. (Rasashastra) OPD, in S.V. Ayurvedic Hospital T.T.D Tirupati. The patient complained of discoloration itching, blackish bilateral upper and lower limbs, and on neck since 8 years. He lichenification over lower limbs, the disease was in chronic stage. He had disturbed sleep due to itching all over the body, he went to allopathy hospital where was treated with he cyclosporin 100 OD, mg tab. methotrexate 5mg BD and folic acid 5

mg OD. This treatment was continued for 1 year. The symptoms subsided to some extent but the patient did not get complete relief. Patient was advised to take these medicines for a very long time. Though he took medicines for a long time, he did not get complete relief and allopathy medicines have their own side effects. So, he came for *Ayurvedic* treatment for the better relief.

Table-1 GENERAL EXAMINATION

B.P	110/70mm of Hg		
Pulse	76 beats per minute		
Ahara	Mixed diet		
Vihara	Divaswapna (occasionally)		
Appetite	Good		
Bowel	Regular once in a day		
Bladder	Normal		
Sleep	Disturbed		

# TABLE-2:DASHAVIDHA ROGI PAREEKSHA

Prakriti	VataKapha		
Vikriti	Pitta Pradhana		
	tridosha		
Sara	Madhyama		
Samhanana	Madhyama		
Satmya	Madhyama		
Pravara	Mdhyama		
Satva	Madhyama		
Ahara sakti	Madhyama		
Vyayama sakti	Madhyama		
Vaya	Yauvana		

# TABLE NO-3:ASHTAVIDHAPAREEKSHA

Nadi	76 beats per minute
Mala	Once in a day
Mutra	Normal
Jihva	Alipta
Shabda	Normal
Sparsha	Anushna sheetha
	(normal)
Drik	Prakritha

Akrithi

Madhyama

#### LOCALEXAMINATION:

- 1. Site of lesion-over bilateral lower limbs, on hands and on the neck
- 2. Distribution-Assymetrical
- 3. Colour-Black
- 4. Itching-Present
- 5. Inflammation-Absent
- 6. Discharge-Absent
- 7. Superficial sensation on lesion-Normal

#### **Treatment Given:**

- 1. *Nidana Parivarjana* (Abstain from causative factors like *Ahara-Vihara*)
- 2. Application of *Sindhuradya taila* on affected area twice a day (Quantity Suffecient)

#### **Before treatment**

**Image Number-1** 

#### After treatment

**Image Number-2** 

#### **Before treatment**

**Image Number-3** 

#### **After treatment**

**Image Number-4** 

#### **RESULT:**

- The blackish discoloration over upper and lower limbs decreased, *lichenification* decreased, itching completely reduced.
- The therapy had shown marked improvement in the patient.

## **Assessment of Results:**

Assessment of Results:							
Sr.	Complaints	Before	After				
No		Treatment	Treatment				
1.	Kandu	+++	-				
2.	Pidaka	-	-				
3.	Srava	++	-				
4.	Shyavata	+++	-				
5.	Rukshata	+++	+				
6.	Raji	-	-				

#### **DISCUSSION-**

Table No.4.Showing RasaPanchaka of Sindhuradya taila:

	Ingredients	Rasa	Guna	Virya	Vipaka	Karma
1	Sarshapa taila	Katu	vishada,	Ushna	Katu	Kaphavatahara <sup>5</sup>
			laghu,			
			sheeta			
2	Arka patra	Katu,	Ruksha	Ushna	Katu	Vata kapha
		tikta				hara <sup>6</sup>
3	Haridra	Katu,	Ruksha	Ushna	Katu	Kaphapittahara <sup>7</sup>
		tikta				
4	Girisindhura	Katu,	ushna	Ushna	Katu	Tridoshahara <sup>8</sup>
		tikta				
5	Tuttha	Katu	Tikshna	Ushna	Katu	Kaphavatahara <sup>9</sup>

Based on this, the Probable Rasa Panchaka for Sindhuradya taila is

- Rasa-Katu, tikta
- Guna-tikshna, Ruksha
- Virya-ushna
- Vipaka-katu
- Karma-vata kapha hara, kapha pitta hara, kushtaghna, kandughna.

### Probable mode of action:

- *Tailakalpana* is included under *Bahirparimarjana chikitsa*, it is one among the *sneha kalpana*.
- Snehakalpana may be defined as -"A pharmaceutical process to prepare oleagenious medicaments substances like kalka. kwatha and Drava dravya, in specific proportions by subjecting it to unique heating pattern and duration to fulfill certain pharmaceutical parameters according to the need therapeutics. This process ensures transformation active of ingredients to the solvents.
- Sarshapa taila effectively helps in reducing Kandu and Rukshata, because of its unctuousness and katu rasa.<sup>10</sup>

- The external application of *taila* prepared from *Arkapatra Swarasa* and *Sarshapa taila*, *Haridra* relieves *Pama* and *Vicharchika*. <sup>11</sup>
- Haridra has Varnya property which effectively helps reducing Shyavata, 12 It's antiinflammatory activity is investigated with reference to inhibition of activated proteases responsible for acute inflammatory process. (Tripathi et al, 1973) 13
- Giri sindhura has tridosha shamana property, and Lekhaniya, kandughna properties which play a key role in mitigating kandu. Sindhura when used as an external application, cures all types of Kshudra kushta. 14
- *Tuttha* has *Lekhana* property that helped in curing *lichenification*. 15

#### **Conclusion:**

From the present study, it can be concluded that *Sindhuradya* taila that contains *Shuddha Girisindhura*, *Shuddha tutha*, *Haridra*, *Arka patra*, and *sarshapa taila* is effective in treatment of

*Vicharchika*, No adverse effects were reported during the entire study period.
